Suffolk
IP30 0DG

## About me

I am a Masters of Architecture graduate with an interest in the comfort of building users in terms of scale, material and the nature of interaction between occupants. I am interested in the integration of architectural research with building design as I believe this has potential to make a positive impact on ordinary people and on the sustainability of the architecture of the future. I am a good team player and I am logical, efficient and enthusiastic.

Walking sketch - Madrid, 2017
